

Connect to S3 from your local Ubuntu file system

For Mac and Linux you can connect to s3 buckets from your local file navigator using s3fs

<https://cloud.netapp.com/blog/amazon-s3-as-a-file-system>

Here are the commands you need for Ubuntu. Replace BUCKETNAME with the name of your S3 bucket.

```
cd ~/;  
  
# for Debian (Ubuntu)  
sudo apt-get install s3fs;  
  
# for mac use Brew install s3fs  
  
echo ACCESS_KEY:SECRET_KEY > ~/.passwd-s3fs;  
# confirm entry was added  
cat ~/.passwd-s3fs;  
chmod 600 .passwd-s3fs;  
mkdir ~/BUCKETNAME-s3-drive;  
s3fs BUCKETNAME ~/BUCKETNAME-s3-drive;
```

you can then navigate the s3 drive as a local drive
