

# Localstack notes

To simulate SQS, it internally uses ElasticMQ

You can start LocalStack via Docker, for example, and it will start the following services:

- API Gateway at <http://localhost:4567>
- Kinesis at <http://localhost:4568>
- DynamoDB at <http://localhost:4569>
- DynamoDB Streams at <http://localhost:4570>
- Elasticsearch at <http://localhost:4571>
- S3 at <http://localhost:4572>
- Firehose at <http://localhost:4573>
- Lambda at <http://localhost:4574>
- SNS (simple notification service) at <http://localhost:4575>
- SQS at <http://localhost:4576>
- Redshift at <http://localhost:4577>
- ES (Elasticsearch Service) at <http://localhost:4578>
- SES (email) at <http://localhost:4579>
- Route53 at <http://localhost:4580>
- CloudFormation at <http://localhost:4581>
- CloudWatch at <http://localhost:4582>
- SSM (system manager) at <http://localhost:4583>
