

Water System Monitoring

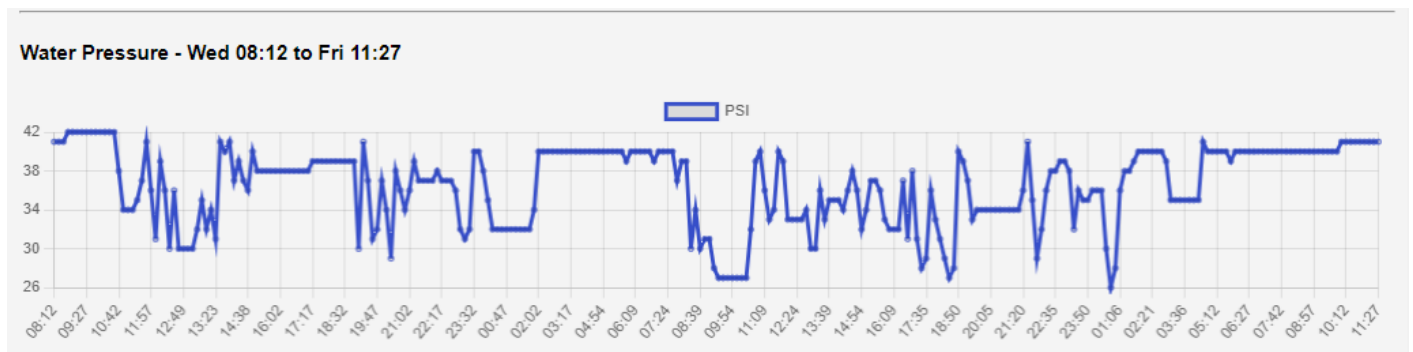

For this project I needed a way to confirm the water pump at a remote location was functioning properly over time. The goal was to ensure the pressure is kept at a consistent 40 psi.

The solution was relatively inexpensive (\$15 in parts) for an easily assembled unit using an automotive pressure sensor. The pressure sensor is wired to a ADS1115 module which then converts to voltage back to a pressure reading. The pressure reading is sent every 5 minutes to a remote server which logs the data and makes the readings available through a web page with line charts.

The server is an HP Elitedesk Pro mini pc with linux running through cloudflare (also free).

Chart on server showing pressure readings over last 2 days

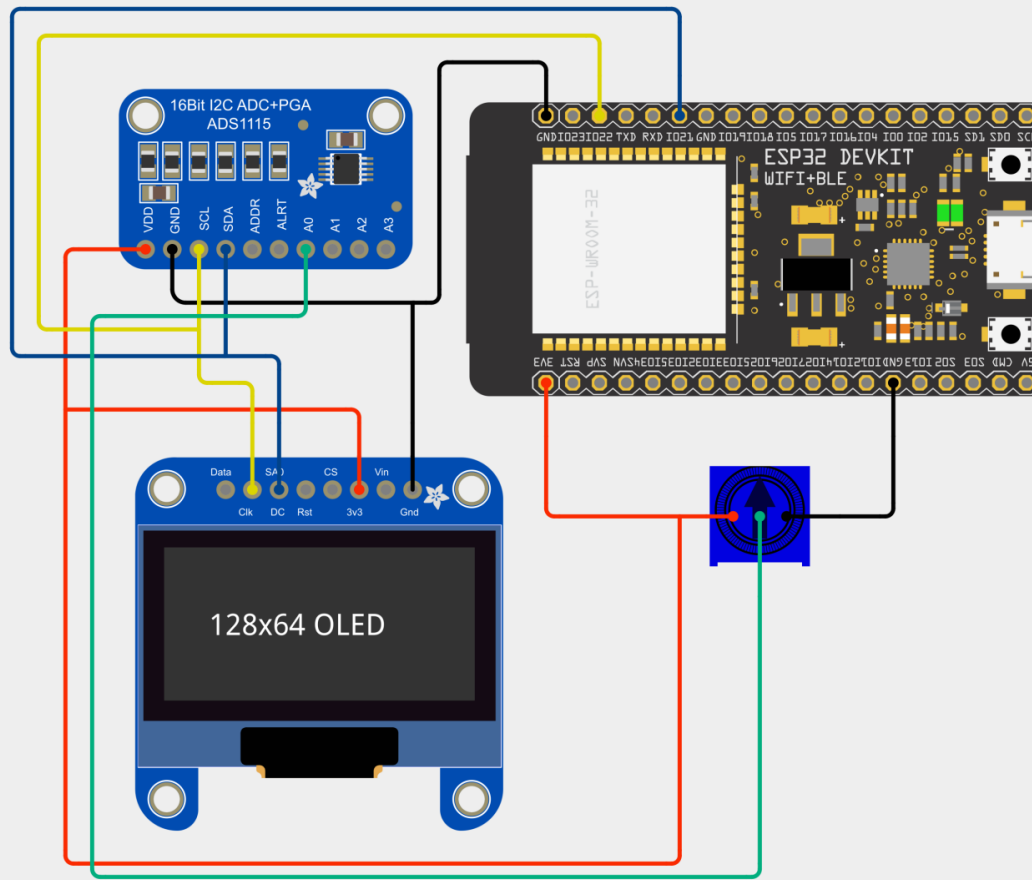

Components:

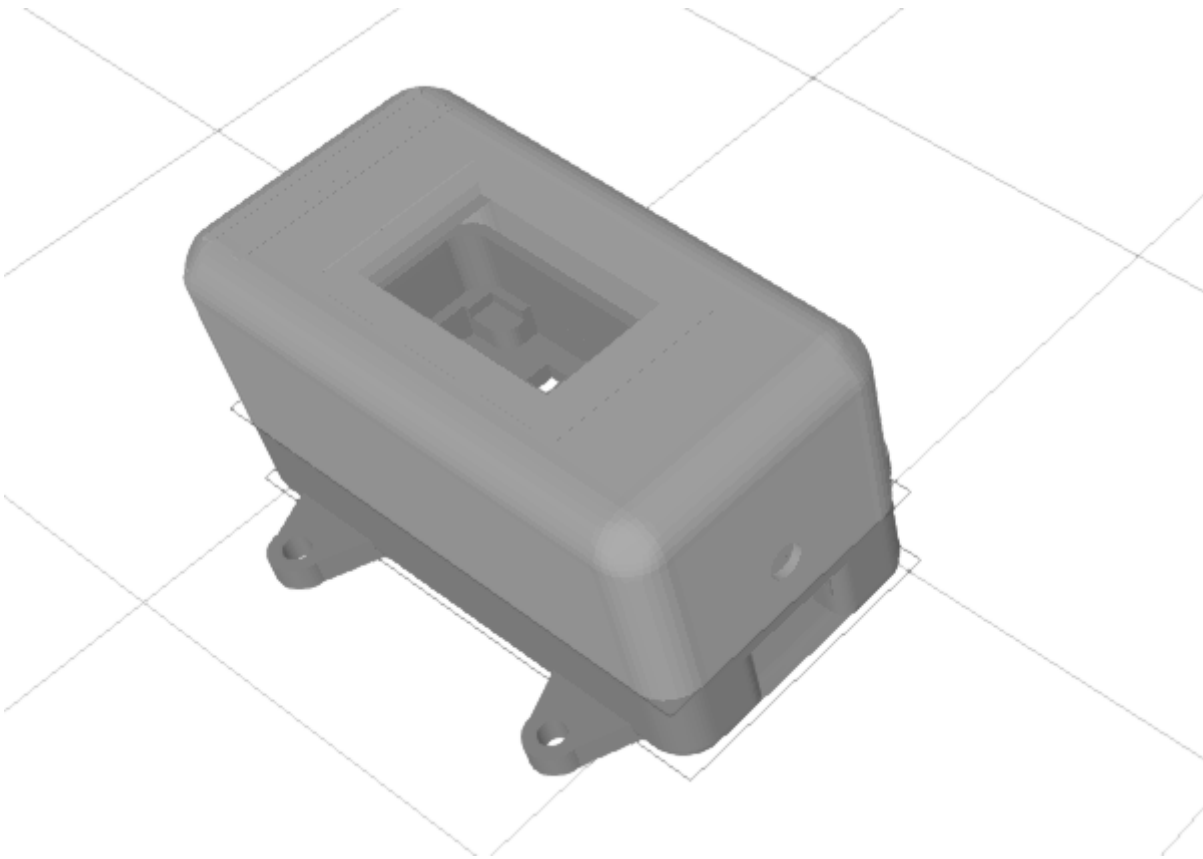

- ESP32 WROOM (\$4.76 CAD) - <https://www.aliexpress.com/item/4000471022528.html>
- 5V 1/8NPT Pressure Transducer (\$6.15 CAD) - <https://www.aliexpress.com/item/1005005255271180.html>
- 16 Bit I2C ADS1115 Module (\$2.79 CAD) - <https://www.aliexpress.com/item/32817162654.html>

- OLED SSD1306 (\$1.53 CAD) - <https://www.aliexpress.com/item/32643950109.html>
